

In the claims:

Following is a complete set of claims as amended with this Response.

1. (Currently Amended) A method comprising:
receiving user preferences for entertainment program characteristics from a user at an electronic device;
storing the received user preferences at the electronic device;
receiving an electronic programming guide at the electronic device ~~entertainment programming input;~~
receiving a selection of an entertainment program within the electronic programming guide from a user at the electronic device;
identifying multiple available versions of an the same selected entertainment program in the electronic programming guide;
identifying, for each of the multiple versions, a set of characteristics of each descriptive information regarding the respective version of the same selected entertainment program; and
selecting, by the electronic device, one of the multiple versions for display by comparing the identified characteristics to the received ~~based on the sets of descriptive information and on a set of~~ user preferences for entertainment program characteristics.
2. (Original) The method of claim 1, wherein identifying comprises identifying multiple versions of the entertainment program that start within a threshold period of time of one another.
3. (Original) The method of claim 1, wherein at least some of the multiple versions are provided on different transport media, the method further comprising:

identifying, for each of the one or more different channel transport media, a set of descriptive information regarding the channel transport medium; and

wherein selecting comprises selecting one of the multiple versions for display based on the sets of channel transport medium descriptive information.

4. (Currently Amended) The method of claim 1, ~~further comprising receiving a selection of an entertainment program and~~ wherein identifying multiple versions comprises identifying alternate versions of the selected entertainment program that all start at approximately the same time.

5. (Currently Amended) The method of claim 1, wherein selecting comprises selecting the one of the multiple versions having the identified characteristics ~~set of descriptive information~~ most closely resembling the ~~set of~~ user preferences for entertainment program characteristics.

6. (Currently Amended) The method of claim 1, ~~wherein, the descriptive information has a plurality of characteristics, and~~ wherein selecting comprises selecting the one of the multiple versions having the most number of characteristics that conform to the ~~set of~~ user preferences.

7. (Currently Amended) The method of claim 1, wherein the identified characteristics ~~set of descriptive information~~ for each of the multiple versions includes one or more of channel transport medium, duration of the version, type of audio support for the version, availability of enhanced programming for the version, language of subtitles in the version, language spoken in the version, screen format of the version, and color code of the version.

8. (Currently Amended) The method of claim 1, further comprising:
identifying a user of an entertainment system;
accessing user preferences for the identified user;
and wherein selecting comprises selecting the one of the multiple versions for display based on a comparison of the identified characteristics ~~sets of descriptive information~~ to the accessed user preferences.

9. (Currently Amended) The method of claim 1, wherein identifying multiple versions comprises identifying multiple versions in the ~~searching through data of an~~ electronic programming guide.

10. (Currently Amended) A storage medium having stored thereon a plurality of instructions that, when executed by a processor, result in:

receiving user preferences for entertainment program characteristics from a user at an electronic device;

storing the received user preferences at the electronic device;

receiving an electronic programming guide at the electronic device ~~entertainment programming input;~~

receiving a selection of an entertainment program within the electronic programming guide from a user at the electronic device;

identifying multiple available versions of an the same selected entertainment program in the electronic programming guide;

identifying, for each of the multiple versions, a set of characteristics of each descriptive information regarding the respective version of the same selected entertainment program; and

selecting, by the electronic device, one of the multiple versions for display by comparing the identified characteristics to the received based on the sets of descriptive information and on a set of user preferences for entertainment program characteristics.

11. (Original) The storage medium of claim 10, wherein the plurality of instructions, when executed by the processor, further result in identifying multiple versions of the entertainment program that start within a threshold period of time of one another.

12. (Original) The storage medium of claim 10, wherein at least some of the multiple versions are provided on different transport media, wherein the plurality of instructions, when executed by the processor, further result in:

identifying, for each of the one or more different channel transport media, a set of descriptive information regarding the channel transport medium; and

selecting one of the multiple versions for display based on the sets of channel transport medium descriptive information.

13. (Currently Amended) The storage medium of claim 10, wherein the plurality of instructions, when executed by the processor, further result in ~~receiving a selection of an entertainment program and~~ identifying alternate versions of the selected entertainment program that all start at approximately the same time.

14. (Currently Amended) The storage medium of claim 10, ~~wherein the descriptive information has a plurality of characteristics, and~~ wherein the plurality of instructions, when executed by the processor, further result in selecting the one of the multiple versions of the entertainment program having the identified characteristics ~~set of descriptive information~~ most closely resembling the set of user preferences.

15. (Currently Amended) The storage medium of claim 10, wherein the identified characteristics set of descriptive information for each of the multiple versions includes one or more of channel transport medium, duration of the version, type of audio support for the version, availability of enhanced programming for the version, language of subtitles in the version, language spoken in the version, screen format of the version, and color code of the version.

16. (Currently Amended) An apparatus comprising:

a program guide controller to receive and store an electronic programming guide entertainment programming input;

a user preferences store containing user preferences received from a user for entertainment program characteristics;

a selection controller coupled to the program guide controller to receive a selection of an entertainment program, to identify multiple available versions of the selected an entertainment program, to identify, for each of the multiple versions, characteristics of each a set of descriptive information regarding the respective version and to select one of the multiple versions for display by comparing the identified characteristics to the stored based on the sets of descriptive information and on a set of user preferences for entertainment program characteristics; and

a device controller, coupled to the selection controller, to display the selected one of the multiple versions of the entertainment program.

17. (Original) The apparatus of claim 16, wherein the selection controller is also to identify multiple versions of the entertainment program that start within a threshold period of time of one another.

18. (Original) The apparatus of claim 16, wherein at least some of the multiple versions are provided on different transport media and wherein the selection controller is further to:

identify, for each of the one or more different channel transport media, a set of descriptive information regarding the channel transport medium; and

choose one of the multiple versions for display based on the sets of descriptive information.

19. (Currently Amended) The apparatus of claim 16, wherein in selecting one of the multiple versions for display, the selection controller is to select the one of the multiple versions of the entertainment program having the characteristics set of ~~descriptive information~~ most closely resembling the set of user preferences.

20. (Currently Amended) The apparatus of claim 16, ~~wherein the descriptive information comprises a plurality of characteristics and~~ wherein the selection controller selects the one of the multiple versions having the most number of characteristics that conform to the set of user preferences.

21. (Currently Amended) The apparatus of claim 16, wherein the characteristics set of descriptive information ~~for each of the multiple versions includes~~ one or more of duration of the version, type of audio support for the version, availability of enhanced programming for the version, language of subtitles in the version, language spoken in the version, screen format of the version, and color code of the version.

22. (Original) The method of claim 1, further comprising determining the user preferences by receiving preference information through manual inputs from a user.

23. (Original) The method of claim 1, further comprising determining the user preferences by monitoring the viewing behavior of a user.

24. (Original) The method of claim 1, further comprising identifying a particular user and applying user preferences for the identified user.

25. (Original) The apparatus of claim 16, further comprising a user interface controller to receive user preferences through manual information inputs from a user.

26. (Original) The apparatus of claim 16, further comprising user preferences to monitor the viewing behavior of a user and determine the user preferences thereby.
